

# How It Works

1. The user enters their personal PIN code to access the cabinet
2. All keys and key sets are individually locked in the KCB 21 cabinet. The green LEDs indicate the keys to which the user has access. The user cannot take the keys indicated by the red LEDs, which remain blocked
3. To return the key, the user enters their PIN again to access the cabinet.
4. An amber LED indicates the return position.
5. The audit trails or single reports can be displayed on the screen or exported to a USB drive for further study and analysis.
6. The exported data can be displayed and edited on your computer, in Excel or similar software.
